

 FAMILY PRE-RUN • 45 MINUTES

Build. Pivot. Walk.

A live decision experiment: first instinct, fair challenge, better next move.

Peyton
Owns the room

Slater
Runs the operator desk

Family
Makes the first call

Not an AI demo. A decision experiment.

The audience gets enough context to make a real call—then Manus pressure-tests the assumption behind it.

1. First call

The room chooses Build, Pivot, or Walk before it sees the counter-case.

2. Fair challenge

Manus gets one narrow job: find the strongest sourced reason the room may be wrong.

3. Better next move

The room re-votes, then the founder names the evidence and test that come next.

The 45-minute arc

Every segment earns the next one. The speed comes from preparation—not from rushing the room.

Host timer cue: Start at 0:00. Let the voting windows—not a shouted cutoff—control the room.

One real decision. Three honest paths.

THE ONE-SENTENCE DECISION

Should we **Build** [specific option], **Pivot** to [alternative], or **Walk / Not Yet** because [risk]?

WHY NOW?

[Deadline, opportunity, constraint, or cost of waiting]

BUILD

[What moves forward? For whom?
What does success look like?]

PIVOT

[What customer, model, route, or
proof point changes?]

WALK / NOT YET

[What stops, waits, or needs more
proof first?]

Bring two public-safe signals with a source or date. Keep private lean, counter-case, and red lines off the projected slide.

Round 1 — Make the first call

“If this were your capital and your next 12 months, would you Build, Pivot, or Walk?”

BUILD

Move forward now.

PIVOT

Take a different route.

WALK

Wait for more proof.

PEYTON SAYS

“Vote now. A one-sentence reason is optional.”

ALEX DOES

Opens Step 1, watches totals—not people—and lets the timer lock voting.

Manus gets one job: challenge the room fairly.

Use approved sources. Do not invent facts. Do not turn the live run into open-ended research.

Counter-case

The strongest good-faith reason the first choice may be wrong.

Alternative

One overlooked competitor, substitute, or route the room may be underweighting.

Mind-changers

The facts or unknowns that should actually affect a reasonable call.

90-second rule: If the live result is not sourced and decision-relevant, use the pre-vetted three-card backup.

Round 2 – The Reality Check

No pressure to switch. Make the best 90-day call with the information we have now.

ROUND 1 • FIRST INSTINCT

What would you do?

Build, Pivot, or Walk based on the case as first presented.

NEW
EVIDENCE

ROUND 2 • NEXT 90 DAYS

What would you fund?

Build now, Pivot to... or Not Yet after the pressure test.

Read the outcome as group movement—not a scorecard or a test of who was “right.”

Peyton + Alex: one cue, one click

Peyton protects the room. Alex makes the tech disappear.

Peyton hosts

1. States the decision.
2. Invites the room to vote.
3. Holds the discussion while Manus runs.
4. Asks for evidence—not personal vote confessions.

Alex operates

1. Starts the rehearsal timer.
2. Opens Step 1, then Step 2.
3. Runs Manus privately or uses the backup.
4. Reads anonymous group movement at the end.

Rule: Peyton gives the spoken cue. Alex makes one matching click. The audience sees neither the host controls nor the raw Manus workspace.

Keep the room moving.

Every fallback protects attention, pace, safety, and the integrity of the decision.

QR first. Vote later.

The voter room starts locked. Phones can join early, but no one votes before the founder case.

The timer is the boundary.

At zero, votes lock in the room and on the server. No late trickle, no shouted cutoffs.

90 seconds, then pivot.

If live Manus output is not sourced and decision-relevant, Alex switches cleanly to the backup reveal.

Read group movement only.

The summary reports anonymous shifts—not names, not personal reasons, not who was “right.”

Did the room change its mind?

The summary measures how evidence moved the group—not who changed or why.

POST-SESSION SUMMARY

First vote → Reality Check → founder-owned next test

What moved us?

Which fact or unknown changed—or confirmed—the call?

What confused us?

Where did the case, reveal, or voting flow feel unclear?

What happens next?

Founder names one evidence threshold and one next learning step.

A great rehearsal feels simple in the room.

- ✓ Peyton can host without touching the control desk.
- ✓ Alex has one obvious click for each spoken cue.
- ✓ Both vote windows lock cleanly at zero.
- ✓ The backup reveal is ready, sourced, and easy to use.

After rehearsal: Fix only the three things that most affect decision clarity, counter-case quality, and reveal readability.
